

Steps to install the JBOSS:

- Firstly install the java
- Now install the jboss
- wget <https://github.com/wildfly/wildfly/releases/download/28.0.1.Final/wildfly-28.0.1.Final.tar.gz>
- then untar the file
- cd wildfy ...
- then go to the /standalone >> configuration >> vi standalone.xml
- change the ip address at the three places

```

        <location name="/" handler="welcome-content"/>
        <http-invoker http-authentication-factory="application-http-authentication
    />

    </host>
</server>
<servlet-container name="default">
    <jsp-config/>
    <websockets/>
</servlet-container>
<handlers>
    <file name="welcome-content" path="${jboss.home.dir}/welcome-content"/>
</handlers>
<application-security-domains>
    <application-security-domain name="other" security-domain="ApplicationDomain"/>
</application-security-domains>
</subsystem>
<subsystem xmlns="urn:jboss:domain:webservices:2.0" statistics-enabled="${wildfly.webs
ervices.statistics-enabled:${wildfly.statistics-enabled:false}}">
    <wsdl-host>${jboss.bind.address:172.31.32.117}</wsdl-host>
    <endpoint-config name="Standard-Endpoint-Config"/>
    <endpoint-config name="Recording-Endpoint-Config">
        <pre-handler-chain name="recording-handlers" protocol-bindings="##SOAP11_HTTP
##SOAP11_HTTP_MTOM ##SOAP12_HTTP ##SOAP12_HTTP_MTOM">
            <handler name="RecordingHandler" class="org.jboss.ws.common.invocation.Rec
ordingServerHandler"/>
        </pre-handler-chain>
    </endpoint-config>
    <client-config name="Standard-Client-Config"/>
</subsystem>
<subsystem xmlns="urn:jboss:domain:weld:5.0"/>
</profile>
<interfaces>
    <interface name="management">
        <inet-address value="${jboss.bind.address.management:172.31.32.117}"/>
    </interface>
    <interface name="public">
        <inet-address value="${jboss.bind.address:172.31.32.117}"/>
    </interface>
</interfaces>
<socket-binding-group name="standard-sockets" default-interface="public" port-offset="${jb
ss.socket.binding.port-offset:0}">
    <socket-binding name="ajp" port="${jboss.ajp.port:8009}"/>
    <socket-binding name="http" port="${jboss.http.port:8080}"/>
</socket-binding-group>
</subsystem>
</profile>
</server>
</configuration>
</xml>

```

- Save and exit
- then go to /bin and add user
- sh add-user.sh
- add management user
- then give the username and password
- sh standalone.sh
- put ip:8080

Steps to install the nginx:

Yum install nginx

systemctl start nginx

systemctl enable nginx

systemctl status nginx
